Short Environmental Assessment Form Part 3 Determination of Significance

For every question in Part 2 that was answered "moderate to large impact may occur", or if there is a need to explain why a particular element of the proposed action may or will not result in a significant adverse environmental impact, please complete Part 3. Part 3 should, in sufficient detail, identify the impact, including any measures or design elements that have been included by the project sponsor to avoid or reduce impacts. Part 3 should also explain how the lead agency determined that the impact may or will not be significant. Each potential impact should be assessed considering its setting, probability of occurring, duration, irreversibility, geographic scope and magnitude. Also consider the potential for short-term, long-term and cumulative impacts.

Black Creek Park. The new pickleball courts would be constructed along the north side of an existing parking lot. Mapping attached. Black Creek Park at this location is a moderately graded, grassed area, utilized for passive recreation. Enhanced use of this area for increased recreational purposes would occur on OdA hydric soils. Earthen disturbances during construction would be less than 0.95 acres and erosion and sediment controls would be utilized during construction. As soil erosion & sedimentation controls would be utilized, there are no significant impacts to land anticipated.

Stormwater runoff from the project will be directed into existing vegetated swales, thus allowing stormwater runoff to infiltrate into the soil media on site. Runoff will be directed south away from Black Creek, ensuring that additional stormwater runoff is not directed to Black Creek. Stormwater runoff will not be conveyed via a stormwater sewer system. As a result of the aforementioned, no significant impacts to waterbodies are anticipated. The NYS-DEC Environmental Resource Mapper was reviewed and rare freshwater mussels were identified. These mussels are not listed in NYS and as the project will not impact the stream in anyway, no significant impacts to flora and fauna are anticipated.

Mendon Ponds Park. The pickleball courts would be constructed in an existing gravel parking lot located on the east side of hundred acre pond. Mapping attached. Enhanced use of this area for increased recreational purposes would occur on the gravel lot, with PaC and OpC soils under the existing condition. There will be negligible, if any, earthen disturbances as a result of this project as the current conditions are a gravel parking lot. Therefore, there are no significant impacts to land anticipated.

The asphalt paving of the existing stone parking lot will not significantly increase stormwater runoff, however the County does intend to establish two grassed swales adjacent to the pickleball courts. Runoff will not be conveyed via a stormwater sewer system. As a result of the aforementioned, there are no significant impacts to waterbodies are anticipated.

The NYS-DEC Environmental Resource Mapper was reviewed and while non listed species were identified and wetlands are in the vicinity of the project area, the project will not significantly change the existing conditions on site. Therefore, no significant impacts to flora and fauna are anticipated.

- ☐ Check this box if you have determined, based on the information and analysis above, and any supporting documentation, that the proposed action may result in one or more potentially large or significant adverse impacts and an environmental impact statement is required.
- ☒ Check this box if you have determined, based on the information and analysis above, and any supporting documentation, that the proposed action will not result in any significant adverse environmental impacts.

This location is in the vicinity of Rare Freshwater Mussels – Not Listed by NYS

If your project or action is within or near an area with a rare animal, a permit may be required if the species is listed as endangered or threatened and the department determines the action may be harmful to the species or its habitat.

If your project or action is within or near an area with rare plants and/or significant natural communities, the environmental impacts may need to be addressed.

The presence of a unique geological feature or landform near a project, unto itself, does not trigger a requirement for a NYS DEC permit. Readers are advised, however, that there is the chance that a unique feature may also show in another data layer (i.e. a wetland) and thus be subject to permit jurisdiction.

Please refer to the "Need a Permit?" tab for permit information or other authorizations regarding these natural resources.
