Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Project: _____
Date: _____

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency and the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer "Yes" to a numbered question, please complete all the questions that follow in that section.
- If you answer "No" to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box "Moderate to large impact may occur."
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the "whole action".
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

Full Environmental Assessment Form **Part 3 - Evaluation of the Magnitude and Importance of Project Impacts** **and** **Determination of Significance**

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

Reasons Supporting This Determination:

To complete this section:

- Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
- Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- The assessment should take into consideration any design element or project changes.
- Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
- Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
- For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
- Attach additional sheets, as needed.

Analysis of Part 2 potential moderate to large impacts:

Impact on Land:

b. The proposed action may involve construction on slopes of 15% or greater. Four percent (4%) of the project site is noted as having slopes equal or greater than 15%, based on mapped soil units. These areas are thin mapped bands of Ontario Loams (OnF and OnD3) that cross the project corridor and slope down to the Genesee River. While East River Road traverses through three mapped soil units with steep slopes, the road corridor itself has been previously disturbed and is associated with grading flatter than 15%+. Additional area is needed to improve the roadway and to add the trail, but these elements are within and adjacent to the highway ROW and would require minimal disturbance of steeply sloped areas. No adverse impacts to areas of steep slopes are anticipated.

e. The proposed action is anticipated to take 15 months to construct - all in 1 phase, due to the length of the project. Though project work will continue for over 1-year, the active construction will move linearly through the corridor. Temporary inconveniences and impacts during active construction may be encountered due to lane and shoulder closures, etc., but the project is not proposed to result in permanent adverse impacts from the construction duration or process.

Impact on Agricultural Resources:

f. The proposed action looks to improve East River Road and improve pedestrian accommodations within the project corridor. Such additions and improvements to an area could make it more enticing to residential and light commercial development, mainly due to increased accessibility. Agricultural lands have been identified within the project limits, namely on the east side of the road. Though increased development pressure may occur, multiple zoning districts along East River Road within the project corridor are not permitted for certain agricultural purposes - they are zoned predominantly for residential and industrial use. The Town's zoning code focuses agricultural opportunities to the south of the I-90 corridor. The project will not have an adverse impact on agricultural resources; future development projects within the corridor will need to pass through a local site plan review process for approval. Based on the Town's Farmland Protection Plan and zoning code, which indicate anticipated development within the East River Road corridor based on their mapping and findings, the proposed action in of itself is not anticipated to significantly contribute to increased development pressure.

Impact on Human Health:

a. The proposed action is within 1500 feet of the Rochester Institute of Technology (RIT), Goose Landing Senior Apartments, Rochester Regional Family Medicine at RIT, Henrietta Psychiatric NP Care, PLLC, and the Osher Lifelong Learning Institute at RIT. Though these facilities are located adjacent to the project corridor, no significant adverse impacts are anticipated to result from the project. In fact, the increased roadway capacity and other improvements, and the addition of the recreational trail would look to improve accessibility and usability of the East River Road corridor, including for the populations that utilize the aforementioned facilities. Temporary impacts may be encountered during active construction, but the corridor will remain open at least partially open throughout the anticipated 15-month construction period.

Determination of Significance - Type 1 and Unlisted Actions

SEQR Status: ☐ Type 1 ☒ Unlisted

Identify portions of EAF completed for this Project: ☒ Part 1 ☒ Part 2 ☒ Part 3

Upon review of the information recorded on this EAF, as noted, plus this additional support information

and considering both the magnitude and importance of each identified potential impact, it is the conclusion of the
Monroe County Legislature as lead agency that:

☐ A. This project will result in no significant adverse impacts on the environment, and, therefore, an environmental impact statement need not be prepared. Accordingly, this negative declaration is issued.

☐ B. Although this project could have a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

There will, therefore, be no significant adverse impacts from the project as conditioned, and, therefore, this conditioned negative declaration is issued. A conditioned negative declaration may be used only for UNLISTED actions (see 6 NYCRR 617.7(d)).

☐ C. This Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impact(s) and possible mitigation and to explore alternatives to avoid or reduce those impacts. Accordingly, this positive declaration is issued.
